

# Script Editor

StresStimulus test script can be edited using the built-in script editor. To open the script editor, click the **Script Editor** node on the workflow tree.

## Warning

Editing the script in the editor is an advanced feature that can damage the existing test. Make sure to back-up the .ssconfig test file before accessing the editor.

## Features

The script editor has the following features:

- The .ssconfig XML script (a) is displayed in the first tab.
- The .xsd schema document (b) is displayed in the second tab. This document is read-only.
- While making changes in the script, IntelliSense (c) will aid with syntax.
- Script errors can be seen in the Error List (d) window while editing the script.
- After making changes in the script, click the Validate button (e) to validate the document against the schema. All errors will be shown in a result dialog box.
- Click the Save & Exit button to save the script file, close the editor, and reload the script in StresStimulus.
