

Installing Agents on Microsoft Azure

First, install StresStimulus on a Microsoft Azure Virtual Machine. Add an Endpoint on the virtual machine to port 49998. The figure below shows an example of how it can be configured.

1

1. From the Microsoft Azure dashboard, select your virtual machine and select the Endpoints option.
2. Create a custom Endpoint for TCP port 49998 or another port if you changed the default port while [configuring the agent](#).
